

Florissant 100 & 100C are a fresh flower conditioner to stop ethylene damage in flowers. Only difference between 100 & 100C is the concentration.

Florissant 100 & 100C is the most effective treatment to protect flowers from ethylene damage, internal and external.

USER INFORMATION

Florissant 100 & 100C is a post-harvest treatment for growers, especially developed for ethylene-sensitive flowers. Ethylene is a stress hormone that causes accelerated efflorescence. Florissant 100 & 100C protect flowers from ethylene damage.

For: Carnation, Lily, Alstroemeria, Delphinium, Gypsophila, Phlox Veronica, Asclepias and other ethylene sensitive flowers

The deposit containing the silver should be treated and disposed of as chemical waste. Need help? Let us know.
